

Miner Scorpion

In 2012 the ACT Group designed, patented and manufactured a completely moulded cable & hose handling and protection solution

MINER SCORPION

Originally designed for underground continuous miner roof and rib bolting rigs, Miner Scorpion is now commonly used for cable handling and protection on a wide range of machinery.

Miner Scorpion has been developed from our market leading *Twin and Tri-Pull Scorpion* range.

The design allows machinery to extend and retract without the hazard of snagging either hose or cable, causing premature failure.

Machine operators can access the hoses or cables easily, whilst the system prevents accidental disengagement.

The patented side protection cable chain system offers enhanced performance, while each link keeps the ability to protect the hoses and cables even in the most extreme conditions. Keeping the internal fittings contained and controlled while still allowing the use of individual hoses within the protection system.

Miner Scorpion has been designed to accommodate a wide range of services and can be manufactured in a large size range to suit your requirements.

- Reliable**
- Easy access to cables & hoses**
- Maximum wear resistance**
- Lifetime cost effectiveness**

ACT SCORPION *the original and still the best*

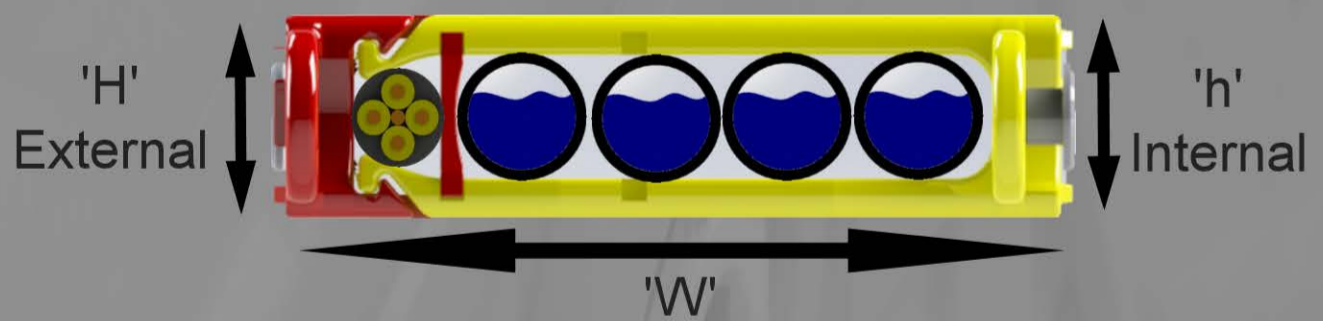

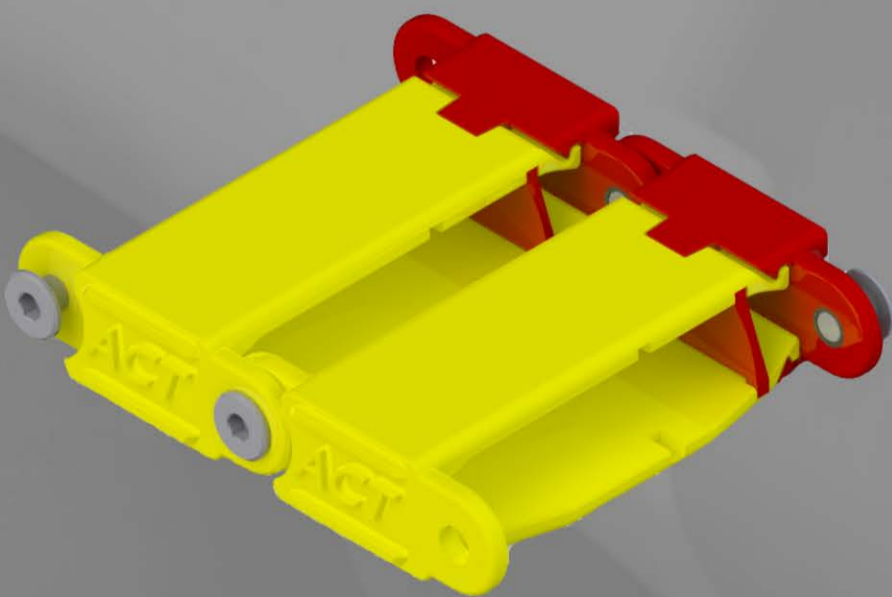

MARKET LEADING CABLE & HOSE HANDLING PROTECTION

Miner Scorpion

Towing strength = 2.1 tonnes

ACT Part No	Link Width External W	Link Height External H	Link Height Internal h	Link Width Internal w	Single Loop Height A
